Introduction

Humana People to People in South Africa (HPPSA) is a national registered NGO registered with the Department of Social Development. It was established in South Africa in 1995, with the goal to respond to the socio-economic needs of the poor. Its first project was established in Soweto in 1998 in cooperation with the local South Africa government. It is a member of the International Humana People to People Federation. Humana People to People works with establishing innovative long and short term development

projects to support children, youth, women and men to protect themselves against diseases; improve their skills and to improve their conditions in general to provide for themselves, their families and communities.

In 2021, Humana People to People in South Africa ran 17 community projects across five South African provinces: KwaZulu-Natal, Gauteng, Mpumalanga, Limpopo, and Eastern Cape. In total, 280,597 people were reached through integrated interventions.

Humana People to People in South Africa projects supports children, youth, women and men to protect themselves against diseases; improve their skills and better their conditions.

Chairman's Welcome

Welcome to the Humana People to People in South Africa Progress Report 2021.

The year 2021 was a true test of resilience due to the many challenges brought on by COVID-19. The threat of being sick, losing your job and your income, not being able to come together forced everyone to come up with new solutions.

If ever there was a time to reinvent or create something new and fresh, this was it. Through adaptation to the 'new normal' imposed by COVID-19, projects stabilised their growth and reach. However, despite COVID-19 preventing the projects from performing at their optimal level, the projects integrated COVID-19 education into their development efforts. By collaborating with the Department of Health and other partners, the projects encouraged people to find ways of coping and not listen to the many misconceptions about COVID-19, not be afraid to know one's status and to be vaccinated, where vaccination was on offer. Thus, all Humana People to People in South Africa programs were geared toward pursuing their ongoing work in South Africa with unmatched energy and motivation.

Although COVID-19 got the necessary attention, South Africans still had all the other challenges to deal with, so there was a need to continue with the tireless efforts of our work. Through 17 community projects in five provinces working together with communities some of the most pressing issues were addressed; HIV/AIDS, TB, non-communicable diseases, malaria, sexually transmitted infections, maternal and child health and COVID-19 through referrals, testing, treatment, education, empowerment and psychosocial support. With income-generating activities and garden farming, communities were better prepared to address poverty, and the Pre-school of the Future Program in KwaZulu-Natal, children and their families created a more secure environment for the people involved.

It would not have been possible to implement the activities without the continued collaboration with our partners. Looking ahead to 2022, we would like to thank all those who contributed their strength and dedication to the efforts to improve the lives of many South African families in 2021. By sharing our stories, we hope you will find encouragement and inspiration! We look forward to continued cooperation in 2022.

“Our programs continued to contribute to the Sustainable Development Goals agenda during Covid-19. We will work towards eradicating poverty and hunger, enhancing health and education, promoting gender equality, creating decent work, and partnering to eradicate climate change.”

Lone Torbensen, Chairman

OUR VISION AND MISSION STATEMENT

“It is about fostering new generations with golden hearts and heads and hands, well-educated and with a personal ethic proportions, that humanized relationships of all sizes can serve as substitutes for all sorts of dehumanized phenomena.”

From the Humana People to People Charter

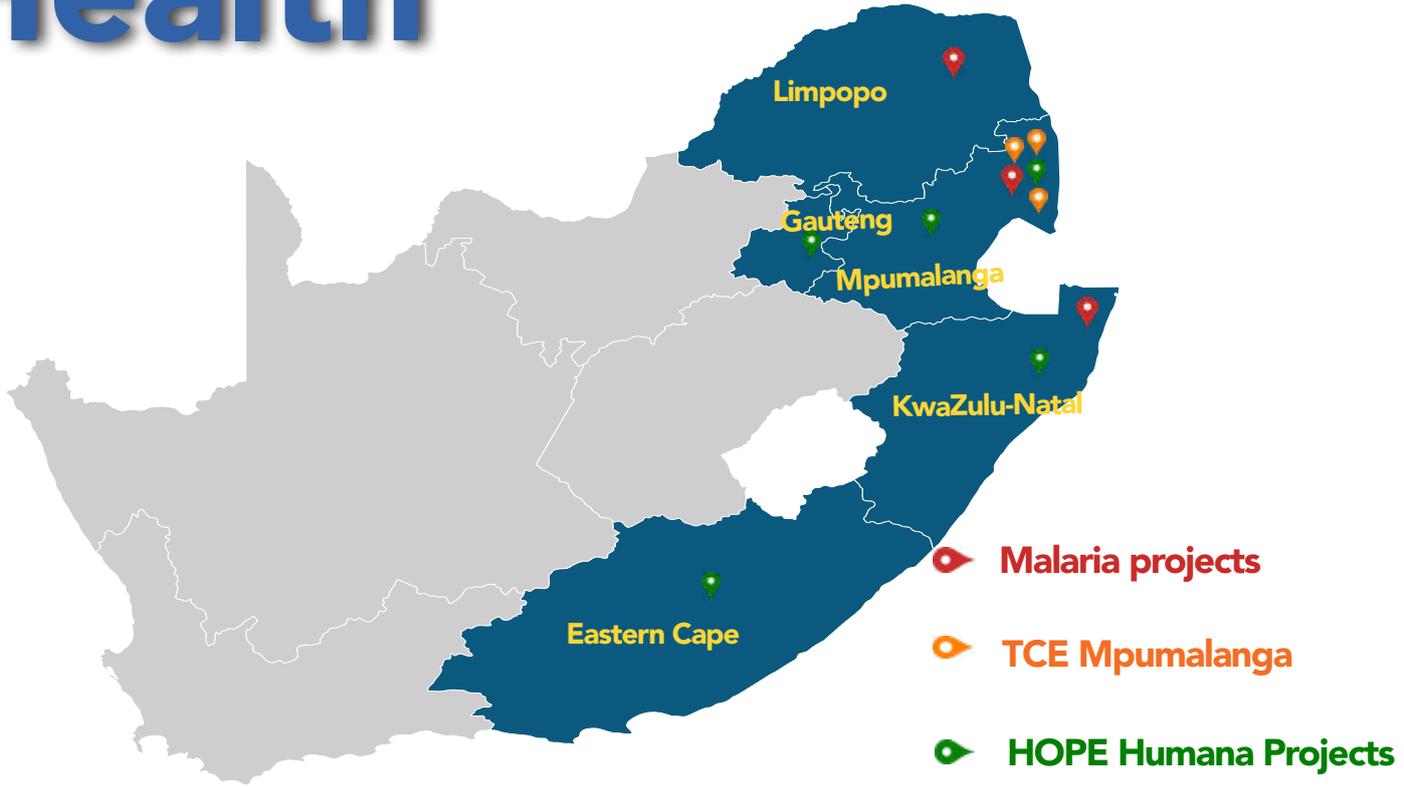

We look upon South Africa as a country with great resources in its people, its culture, and its nature. We look upon South Africa as a country, which plays an important role in the African continent and in the world. We also look upon South Africa as a country with great challenges to be addressed in order to create a society where all people can fulfil their dreams and develop their potential.

Only by a collective effort, these challenges can be overcome.

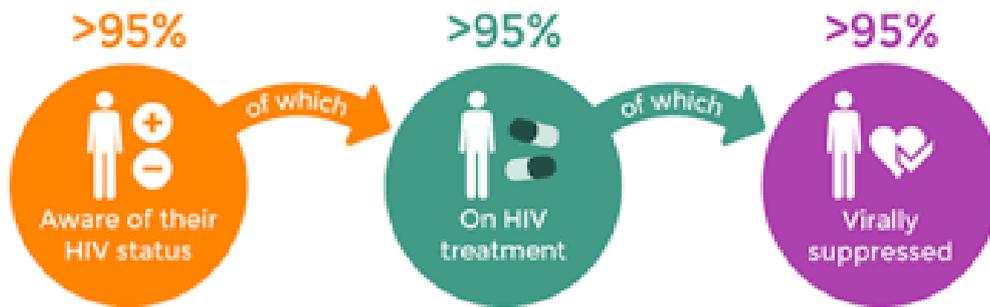

In The Spirit Of Solidary Humanism, We Will:

- **Work with the people to take care of our planet and be ready to fight the challenges of climate change;**
- **Train and empower communities to take total control of HIV, TB, Malaria, COVID-19 and other pressing health matters;**
- **Educate, nurture and inspire children to become active and responsible members of society;**
- **Equip individuals and families to meet their economic needs through skills training and income generating activities;**
- **Empower youth and adults with professional and life skills to play their part in development;**
- **Promote, advocate for and support volunteerism as an integrated part of creating development that benefits both the people and the society as such;**
- **Practice and promote non-discrimination, global understanding and cooperation and contribute to creating equal opportunities for everyone;**
- **Deliver relief, care and support to vulnerable groups;**
- **Co-operate with other organisations, government departments and local structures to achieve the Sustainable Development Goals by 2030 as set out by the United Nations.**

Health

The Total Control of the Epidemic (TCE), contributing to reaching the 95-95-95 goals and creating a South Africa in control of HIV/AIDS

Although the fight against HIV and AIDS has come a long way, it is still the disease causing some of the biggest challenges for people in South Africa. 7.8 million people are still living with HIV, of which more than 300,000 are children. The prevalence rate is highest among young and adult women with an estimated prevalence rate of 24.7 % (UNAIDS 2020). Number of new infections have gone drastically down the last 5 years and is now estimated at 220,000 of which more than 60% are young and adult women. Therefore, the fight against HIV and AIDS is still one of the most important fights for development in South Africa, especially among the poorest populations.

The Total Control of the Epidemic, widely known as TCE raises awareness to special target groups and work hand in hand with government to offer the necessary care and support to those living with HIV.

Since the start of the TCE program in year 2000, more than 5 million South Africans have been reached at their doorstep across 6 provinces (Mpumalanga, Limpopo, KwaZulu-Natal, Gauteng, Eastern Cape, and Free State) and provided with comprehensive HIV/AIDS education and counselling and linkage to care. The motto was and still is "Only the people can liberate themselves from HIV the epidemic".

In the midst of COVID-19, the TCE program continued to provide integrated HIV and AIDS, sexual and gender-based violence services to adolescent girls and young women as well as to adolescent boys and young men to build their understanding and preparedness and thereby strengthen their efforts to get HIV and AIDS under control.

In 2021, TCE started a new program Woza Asibonisane using the Stepping Stones methodology. Placed right where the need was greatest in the 3 sub-districts of Mpumalanga Province (Bushbuckridge, Nkomazi and Thaba Chweu), the program involved people in discussions and actions.

TCE Woza Asibonisane Program!

In 2021, TCE started a new one-year program, Woza Asibonisane. The program was implemented in 3 districts in Mpumalanga. It built on the Stepping Stones methodology and had various elements targeting both adolescent girls and young women and men. Specifically, the program aimed at both to raise awareness about HIV and refer people for HIV testing and further treatment and care.

Sexual and gender-based violence messages were an integral part of the program for changing norms and behaviours

among youth. The stepping stones sessions provided adolescent girls and young women (AGYW), including young men, with tools they could use to help reduce sexual and gender-based violence in the community.

The people became change agents and took better control of their health and wellbeing.

Some of the 2021 highlights includes;

- 16 334 people reached through Stepping Stones peer group discussions
- 3777 people tested for HIV with 12 linked for treatment

- 16246 young women and men benefitted from this program
- 228 841 condoms distributed
- 2,000 adolescent boys and young men reported positive changes in their sexual attitudes and behaviours.

Due to the program, there was an improved uptake of pre-exposure prophylaxis among adolescent girls and young women, resulting in a low rate of newly diagnosed HIV positives. Community involvement and participation was integral to the success of the program. One of the key impacts of this program was that 90% of the links were confirmed.

HOPE projects in four provinces bringing hope and action to end the HIV and TB pandemics

Development and change is only made when the community is driving it. The HOPE program is following this principle by giving local people a capacity to respond better to HIV/AIDS and TB pandemic. Our field workers and caregivers are recruited directly from the communities in which the program operates. Therefore, local people play an active role in addressing HIV/AIDS, TB, sexually transmitted infections and non-communicable diseases affecting their communities.

The HOPE program was established in 2003 in Durban when the AIDS epidemic was at its highest. Today it is active in four provinces and providing both prevention and care messages to communities still struggling with HIV and also TB. The HOPE projects are funded by the National Department of Health and National Social Development. Currently, the program operates in the Eastern Cape (Or Tambo), Gauteng (Region C & Orange Farm), Mpumalanga (Bushbuckridge & eMbalenhle) and KwaZulu-Natal (uPhongolo). Today, HOPE operates in 5 centres in four provinces. HOPE was designed to bring

hope to the people affected by HIV/AIDS and strengthen their ability to act upon the stigma and all the frightening effects of the disease. The fight against HIV/AIDS has come a long way but still it is a disease affecting many people's lives in South Africa.

The HOPE projects have become productive centres where people seek support as well as take active steps to combat some of the most devastating issues faced on a daily basis. Care givers, field workers and volunteers conduct outreach campaigns to reach out to people who otherwise

would not be reached. The centres carry out the following program elements:

- HIV and TB screening
- HIV testing services
- Referral for ART Initiation
- Home based care providing support and comfort to patients and their families
- Support groups and nutritious food aid
- Gender based violence campaigns
- Referral for Voluntary medical male circumcision
- Support to Orphans and Vulnerable Children

HOPE Bushbuckridge

In 2007, Hope Bushbuckridge was founded to serve poor rural communities in Bushbuckridge affected by HIV/AIDS and tuberculosis. In addition, it provides supplementary social support for both infected and affected in order to remove barriers to obtaining services, support, and care. Each year, orphans and vulnerable children are enrolled in the program. Following a three-year mass TCE campaign reaching more than 500 000 people in Ehlanzeni District. The project is a continuation of that work in Bushbuckridge.

HOPE OR Tambo

Project objectives are to empower people in targeted areas of the OR Tambo District with the skills and tools necessary to combat HIV, AIDS, TB, sexually transmitted infections, and noncommunicable diseases, as well as their impact. Tracking of missed follow-ups and their link to treatment is also included. As part of the project, people are integrated into care, treatment, and support, while HIV Testing Services (HTS) are strengthened in the community. Humana People to People in South Africa began operating this project in January 2021 as part of the positive partnership it has developed with the National Department of Health over the years.

HOPE Johannesburg Health Metro District

In October 2021, the Hope Johannesburg project was launched with funding from the National Department of Health. This project aims to reach most at risk and underserved communities, groups and individuals in Gauteng through the provision of high quality HIV, STI, TB, and NCD services through a home-based approach. In its targeted areas of the City of Johannesburg Metropolitan Municipality, the project aims to equip people with the skills and tools necessary to combat HIV/AIDS, TB, sexually transmitted infections, and noncommunicable diseases, as well as mitigate their consequences.

HOPE uPhongola

Humana People to People in South Africa pioneered the HOPE uPhongolo project in 2013 due to high rates of unemployment, poverty, and HIV prevalence in the Zululand district. The project is providing information and health services to the community of uPhongolo that contributed to the decline in new HIV infections in the region. Through home visits, health awareness campaigns, and health talks, the project aims to reduce the high rate of new HIV and TB infections in the community and encourage the participants to participate in health-related activities to prevent the spread of those diseases.

HOPE CHANGED MY LIFE

The number of orphans and vulnerable children is increasing daily in South Africa. Thus, Humana People to People created the Orphan and Vulnerable Children programme as part of its HOPE and Child Aid project. The main focus of this program is to make sure that OVCs are physically and psychologically cared for. In the project, OVCs have access to a drop-in center that assists with homework and meals.

Here is an inspiring story about a young lady who is part of this program:

“At a young age, my mother abandoned me and I was raised by my father. Due to my father’s financial struggles, I lacked toiletries, which negatively affected my hygiene. Additionally, I had a hard time concentrating at school and completing my homework. On top of that, I was too shy to talk openly about my problems.

I was helped by Selina from HOPE Bushbuckridge during a door-to-door outreach. She registered me under the OVC program at HOPE Bushbuckridge. As part of the program, I received schoolwork support, hygiene packs, daily meals, as well as information about HIV/AIDS, life skills, children’s rights, and sexual reproductive health.

With the program’s help, I was able to focus on my studies and get good grades, as I want a better future for my father and I. I have become more aware of HIV/AIDS, children’s rights, life skills, and the importance of sexual health. Through the life skills lessons, I have gained a bit of confidence and my engagement levels have improved. With the support and help I receive daily, I will be able to make the best decisions about my life and future.

Since I am still interested in being guided and supported with my schoolwork, I will continue to participate in the OVC programme. Thank you so much for your support!”

Charity’s story is the reason why Humana People to People will continue to run this program. We reach thousands of orphans and vulnerable children every year with life-skills workshops, HIV/AIDS education, substance abuse and teen pregnancy prevention, and education on children’s rights.

Working together with the community to reduce malaria cases in regions along the borders and the burden this epidemic imposes.

Humana People to People in South Africa has been implementing the Malaria Control and Elimination program since April 2017 in Limpopo, Mpumalanga and KwaZulu-Natal in partnership with the Department of Health and funding from the Lubombo Spatial Development Initiative².

The program is implemented in low-income areas bordering to Zimbabwe, Mozambique and eSwatini where most malaria cases are prevalent, and where access to health care is difficult due to long distances between communities and health care facilities as well as lack of transport to these facilities. The target is to reach zero malaria transmission by the year 2023.

The program was carried out in close collaboration with the Department of Health that implemented intensive vector control through indoor residual spraying in high-risk areas such as local farms.

Our role was to engage the communities in many of the actions, such as cleaning the environment, conducting case management and giving active malaria health promotion.

Following Department of Health guidelines and standard operating procedures, we followed up with clients and those who were referred to hospitals for testing. In high burdened areas such as local farms, schools, villages and illegal borders.

Throughout the process, we worked together with

the community to prevent unnecessary malaria-related deaths, the surveillance work and getting rid of all malaria breeding sites contributed to secure that malaria cases are reduced. Humana People to People in South Africa' efforts to control and eliminate malaria transmission have made a noticeable difference in the community.

To achieve this, we strengthened active surveillance, tested 89,429 people and treated 918 patients, both asymptomatic and symptomatic. On-the spot treatment was given to malaria patients by the professional nurses

In South Africa, malaria has nearly been eradicated, but there are still 30,000 cases every year, especially in the border regions with Mozambique, eSwatini, and Zimbabwe.

Our Malaria programs are aimed at eradicating malaria in South Africa and are serving underserved populations in these high and low risk areas and are focused largely on migrants and mobile populations due to the risk of parasite importation from countries with high transmission, as well as complex barriers for accessing essential medical services and malaria control

Provision of Malaria testing to staff at Kruger National Park

“To us health means above all ensuring that people have the right information and access to proper health services to live a healthy, protected and happy life.”

Against all Odds: Community Health Worker survives both Malaria and COVID-19 through efficient health services.

Mathebula is a community health worker in Phalaborwa, where malaria is prevalent. As part of his job, he meets many malaria patients and is well aware of the disease's potentially fatal nature. Thus, when he was ill in May, he could only imagine the worst. Mathebula noticed something was wrong when he exhibited severe nausea, vomiting, discomfort, and a high temperature.

“I was scared, I was actually very scared I knew what being sick with malaria meant, but after I did the rapid test, my worst fears were confirmed when the tests confirmed that I had malaria,” he said.

He continued, “I was given artemether-lumefantrine for three days by our nurse. But before I could recover fully, the fever came back within a couple of days. Further tests revealed that I was now suffering from COVID-19. I was later admitted at the hospital for 5 days before being released. It took me a long time to regain some strength”

After recovering from malaria and COVID-19, Mathebula was able to return to the job he loves, saving lives. However, this incident deeply affected him.

“To have malaria and COVID-19 is like signing your death warrant. Apart from your own health, you are also concerned about the well-being of your family and co-workers,”

The support Mathebula received from the project empowered him to educate everyone he met about malaria and COVID-19, including how they can protect themselves from these fatal diseases. In the present day, Mathebula is living a healthy, happy life and spreading malaria awareness in his community.

“I really appreciate the efficiency with which I was treated and the follow-up checks that were done to make sure I was fully recovered.” he concluded.

Community Development

A community organized in a collective manner can overcome even what seems to be insurmountable challenges.

The gap between the rich and the poor remains high in South Africa, and the COVID-19 pandemic has exemplified the inequalities on so many levels.

Child Aid is a model developed by the Humana People to People Federation with the aim of addressing the inhuman state in which millions of children and their families live under. Humana People to People in South Africa started the first Child Aid Doornkop project in Soweto in 1998 and the project is still active today,

With Child Aid, HPPSA works to keep children safe and healthy by providing families with the tools they need to take better care of themselves. In 2021, Child Aid projects were carried out in cooperation with funds from the National Department of Social Development and reached 41,535 people in the four provinces through its various activities.

The Village Action Group is the fundamental organisation in Child Aid. Here people create a forum to hold discussions, plan common tasks, acquire new knowledge, identify challenges, and find and implement solutions together. The VAG's consist of community members who engage themselves to spearhead actions among community members, young and old.

They receive training from the Project Leader employed by HPPSA, who often facilitates the lessons and actions with other community groups and local government. The training and the actions are often geared towards income generation, health actions, care for orphans and other vulnerable children, and food security.

Today, Humana People to People in South Africa runs five Child Aid projects in four provinces: Limpopo (Tubatse and Bakenberg) since 2006, KwaZulu-Natal (Abaqulusi) since

2016 and the Eastern Cape (Mthatha) since 2020.

Some of the 2021 highlights includes;

- 19 428 of families were involved in this program
- 130 570 beneficiaries reached with health and hygiene information
- 513 330 male condoms and 37 872 female condoms distributed
- The projects managed to conduct 51 health campaigns in 2021
- There were 11 208 children and youths active in the project
- At least 48 preschools were involved in the project in the reporting period
- 312 community gardens
- 89 429 clients tested for Malaria with 918 malaria cases detected, and all were treated.

“By training individuals and families in skills and income-generating activities, Humana People to People in South Africa empowers individuals and families to better meet their economic needs.”

By getting right information and motivation, people take control of their lives.

“KwaZulu-Natal remains the province with the greatest number of HIV-infected people in South Africa, according to a study presented at Amsterdam’s 22nd International AIDS Conference by the Human Sciences Research Council.”

Through our Child Aid Program, we are committed to continue assisting parents to be better versions of themselves so that their children can grow up in a better environment and to have a brighter future.

A major portion of Child Aid Abaqulusi’s programs is designed to reach hard-to-reach areas in the Zululand region to provide healthcare and to educate people about health issues they’re faced with every day. The program also links communities to health care facilities for HIV testing, treatment and care through the door-to-door initiative. Meet Sizwe, a 30 year old from a remote village with a relatively low population density, Fuduka village in Vryheid.

“My name is Sizwe and I was diagnosed with HIV. After I was diagnosed I struggled to reach a health facility for treatment and care because of the distance between my village and the facility. Due to this, I stopped taking my HIV medication.

A few days later, I met Sifiso, a health trainer from Child Aid Abaqulusi who counselled me on HIV and AIDS. During our brief conversation, Sifiso asked whether I was aware of HIV/AIDS, I then disclosed my HIV status and that I was not taking my HIV treatment.

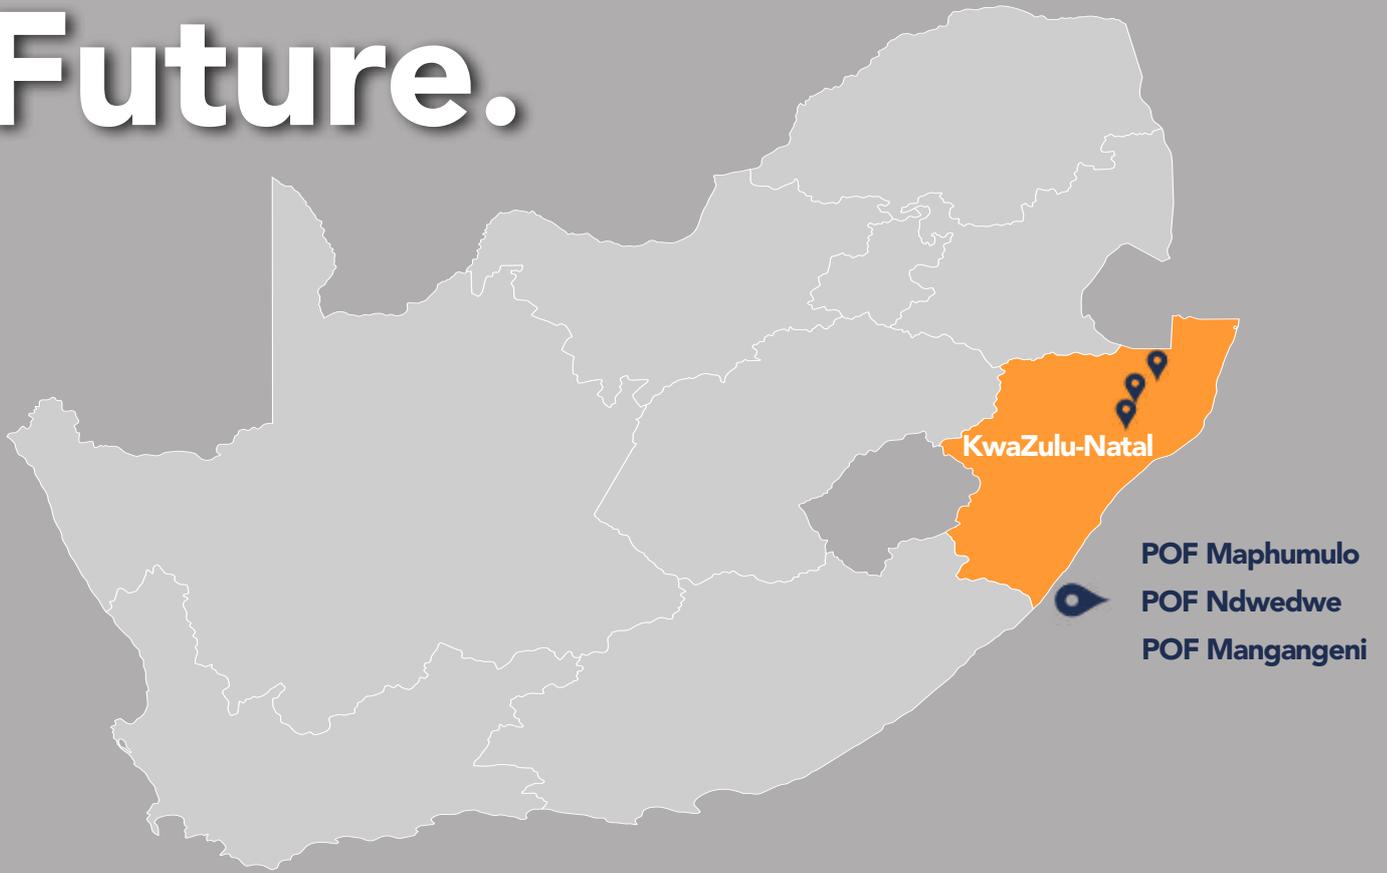

Sifiso explained to me the consequences of not taking treatment and he advised me to keep taking my medications. It was clear that if I did not get antiretroviral treatment (ART) I would die and my children would struggle as well.

As a result of the health trainer’s intervention, I went to a health facility and began on treatment. Now that I’m receiving treatment, I’m also taking care of myself. Sifiso promised to keep track of me to secure I never stop taking my medication again. My health has improved, and I am ready to take on any challenge in my life and most importantly to take care of my children.”

The Joint United Nations Programme on HIV/AIDS (UNAIDS) launched the 95-95-95 targets in 2014. To achieve viral suppression by 2030, 95% of all HIV-positive individuals should be diagnosed, 85% should receive antiretroviral treatment (ART), and 95% should be receiving treatment. Humana People to People supports this vision by linking people in hard-to-reach areas with care and treatment as well as keeping them informed about their status.

Pre Schools of the Future.

PRESCHOOLS OF THE FUTURE OFFERING EARLY CHILDHOOD EDUCATION IN RURAL COMMUNITIES IN KWAZULU-NATAL

Early child development sets the foundation for lifelong learning, behaviour, and health. The experiences children have in early childhood shape the brain and the child’s capacity to learn, get along with others, and respond to daily stresses and challenges.

The Department of Basic Education has just released the 2021 Early Childhood Development Census, which clearly highlights the need for more ECD centres in rural areas and also the need for more and better training of ECD practitioners.

Humana People to People in South Africa aims to provide preschools with child-centred early childhood education through training and support. It is our mission to establish preschools that are based on holistic early childhood

development principles in poor rural communities.

PRESCHOOL OF THE FUTURE

Founded in 1998 in KwaZulu-Natal, the Preschools of the Future (POF) program was established, and operates today at 3 locations in KwaZulu-Natal, specifically Ndwedwe and Maphumulo in the iLembe District and Mangangeni, in the eThekweni Municipality.

The POF movement seeks to engage local communities in the development of its ECD centres. In close collaboration with communities and local government, Humana People to People in South Africa provided much-needed support to preschools.

Some of the 2021 highlights include.

- 30 Preschool teachers were trained in Early Childhood Development (ECD), and their capabilities were honed through the KwaZulu-Natal Experimental College (KNEC) in Durban.
- There were 42 preschools operating with 1,158 children.
- The program assisted 26 community-run preschools to become registered with the National Department of Social Development.
- In addition, the program recorded zero cases of COVID-19 at 42 supported preschools due to the efforts of staff in ensuring the safety of children.

The program is funded by the Government of Monaco.

“Humana People to People in South Africa aims to provide preschools with child-centred early childhood education through training and support. It is our mission to establish preschools that are based on holistic early childhood development principles”

Providing knowledge on child health and nutrition to community-run preschools

Thembeke Ngcobo, 25, a teacher at Thandanani Community Crèche had no idea what kind of food children should eat in order to develop healthy bodies. In addition, she had difficulty in ensuring that children adhere to social distancing and practice good hygiene in order to protect themselves from COVID-19.

For 12 months in 2021, Thembeke received nutrition and hygiene training once a month. The training was provided in collaboration with the Department of Health.

Through the training, Thembeke was made aware of the fact that preschool-age children (ages 3 to 5) are still developing their eating habits. Therefore, they need encouragement from the preschool teachers and family to eat healthy meals. Additionally, she was advised to offer children at the preschool a variety of foods, including fruits and vegetables. Health officials from the Department of Health shared information on COVID-19 with Thembeke in order to ensure the safety of children from the disease.

After the training, Thembeke created a vegetable garden at Thandanani Community Crèche with guidance from the HPPSA Project Leader, Nontobeko Kweyama. The garden provided children at the preschool with nutritious food. She also ensured that in the classroom, each child has a table and a chair. She did this to make sure that the children do not share a table in order to avoid touching each other. Each table was kept 1.5 metre apart. She sanitized the children and helped them wash their hands with soap on a daily basis. The children remained free of germs and diseases as a result.

“My knowledge about the importance of good hygiene and nutrition for children has been improved due to the Preschools of the Future (POF) Ndwedwe project. As I continue to learn from this project, I will always put the health of the preschoolers first,” **says Thembeke.**

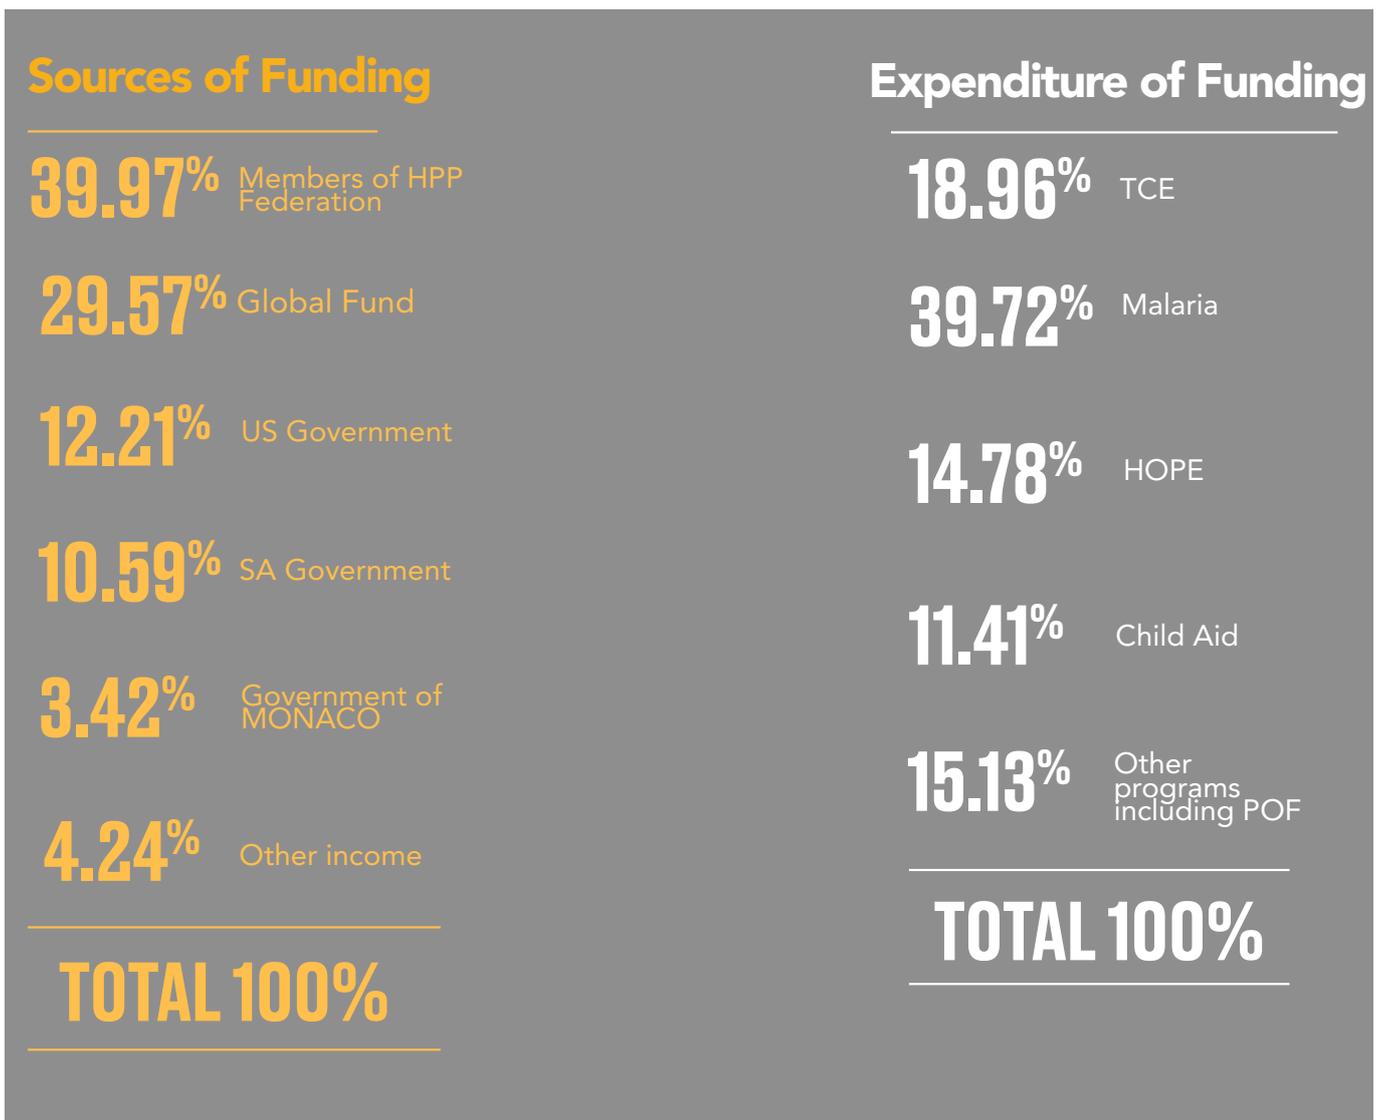

Accountability and Transparency

Humana People to People in South Africa is registered as a local NPO under the Department of Social Development and NPC under the Companies Act. We are committed to adhering to the highest standards of accountability, transparency and good governance. In 2021, we also qualified for a B-BBEE Level One certificate from EMPOWERDEX.

In 2021, Humana People to People in South Africa spent approximately ZAR 47.4 million on our development projects. Our major source of funding was generated from our partnerships in development with governments, foundations, companies, organisations and multilateral grant mechanisms for specific programmes, projects and activities of common interest.

The Financial Administration is based at the organisation’s National Headquarters in Pinetown, Durban. The organisation’s finances are administered according to Generally Accepted Accounting Practice as required by the Companies Act. Our accounts are audited by Nexia SAB & T.

Good Governance

HPPSA was awarded the SGS NGO Benchmarking Certificate on 27 November

2021. The accreditation is a reflection of our robust governance systems, our commitment to accountability towards our stakeholders, and compliance with international best practices. The SGS NGO Benchmarking Certificate recognises an organisation based on their assessments in 99 objectively verifiable indicators. SGS is

an internationally recognised company which has developed the NGO Benchmarking certification audit in 2001 to provide a universal 'trust standard' for NGOs globally. Humana People to People in South Africa is committed to absolute credible practices in its processes and functioning. We have received Accreditation for ensuring the legitimacy and principles of good governance that are in place here. It's of utmost importance that

our project mechanisms are accountable and transparent to re-assure the trust of our stakeholders and partners. Our committed efforts resulted in receiving the recognition and accreditation of the stalwart work.

HUMANA PEOPLE TO PEOPLE FEDERATION

We are Humana People to People in South Africa. We are a member of the Federation for Associations connected to the International Humana People to People Movement. It comprises 29 independent national member associations.

Our common agenda is to protect the planet, build communities and support people by connecting them with others, unleashing their potential for positive change and action.

The Federation supports the members in delivering critical on-the-ground programmes across Africa, Asia, Europe, North America and South America. This support includes programme development, project management and operations, financial management support and help to promote our common agenda and gain influence through important relationships and partnerships.

The activities of the Humana People to People movement are aligned with the UN 2030 Agenda. Together with the people in the communities and our numerous partners, we continue to stand by countries as they strive to meet the Sustainable Development Goals, creating lasting positive change in the process.

The Humana People to People Federation Headquarters is based in the beautiful mountainous area of Shamva in Zimbabwe

PRESENTING OUR PARTNERS

PARTNERSHIP IN DEVELOPMENT

Humana People to People in South Africa works with a diverse range of partners with whom we share the same social and human development objectives.

Partnerships are mutual: a partner may provide the funding needed for a project, while Humana People to People in South Africa provides solutions, because it is rooted in a given community, has tried and trusted project concepts ready, and possesses the needed capacity. Partners include international, national and local governments, foundations, the private sector, multilateral agencies and international organisations.

Partnerships are key to our ability to create and maintain meaningful social and human development projects in accordance with the world's development agenda.

Humana People to People in South Africa maintains strong and active collaboration with its partners, through on-time delivery of both programmatic and financial reporting, through field visits or ongoing communication to exchange emerging challenges and lessons learned. We also offer good exposure to our partners through our website, social media and publications.
